

## MASER USFR V2

Output Verification Kit  
Capture | Download | Analyse | Verify

## THE OUTPUT VERIFICATION PROCESS

### Capture

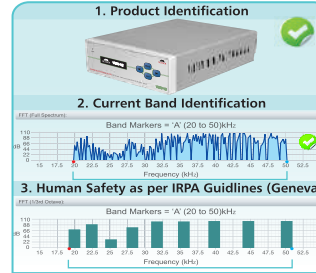

Capture Ultrasound Output Samples from Transducer

### Download

Download the Samples on Your Computer for Analysis by MASER WAVE ANALYSER SOFTWARE

### Analyse

### Verify

Physical Verification on Site  
Product Installed : MASER VHFO V2  
Current Frequency Band : A  
(20kHz to 50kHz)

## AUTHENTICITY TEST FOR OUTPUT VERIFICATION KIT

1. Identify the product, from which the output is being generated, by displaying the product name.
2. Identify the frequency band that was in operation at the time the output was recorded. As the frequency band is continuously changing you can verify the analysis of the software as it should be in sync with the band that was active on the controller at the time of recording the output.

Capture Ultrasound Output Samples from Transducer
